

Are you ready to meet the data sharing and interoperability requirements?

Traditional methods of healthcare data transmissions can lead to mistakes, such as manual data entry errors, errors from illegible handwriting, and lost faxes/mail. We've all been there. With healthcare EDI, you can feel more secure and operate at peak efficiency.

Knowing that the EDI market is expected to grow by 8.8% by 2023, having a solid strategy in place is crucial to meet the demand.

What does the ideal solution look like?

Softheon's Payload management was designed to eliminate the risks and issues associated with importing bad data. Payload provides a secure and efficient integration and file transfer platform that allows you to easily connect to new channels, while ensuring all access points remain protected.

With Payload management, Softheon has established EDI portals between both private and public exchanges, allowing you to easily send and receive validated data in more than a dozen formats.

Features

Automatic connections via secure file transfer protocols where files are instantly extracted and processed

Relevant processed data is transmitted back to the client and exchange in standard 834 X12 format

Standard EDI file (834, 820) validation. Upon import, files are parsed into line-level transactions and normalized

Send and receive files in multiple industry-standard formats (XML, 834 X12, 820, TA1, 999, and more)

Generate and process:

- Enrollment and Eligibility Data (EDI 834)
- Financial Remittance Data (EDI 820)
- Medical and Pharmacy Claim Files (EDI 837)
- Eligibility Benefit Inquiry and Response Files (EDI 270/EDI 271)
- Financial and Medical data files for ETL (Extract, Transform, and Load)
- Reconciliation Files (RCNI, RCNO, Pre-Audit, ISUIPA, and more)
- Acknowledgement Files (999s/TA1s)
